Digital Literacy Assessment

ENGAGE TECH-SAVVY TALENT

Today's jobs require more than great interpersonal and problem-solving skills. To hit the ground running, new hires must also demonstrate basic computer, software, and online proficiency. While it may be tempting to assume candidates have the basic skills needed, a recent study found that more than 75% of workers lack essential digital skills.

While many assessments focus on only one aspect of technology, such as basic computer skills, knowledge of common software programs, or the ability to navigate online, our Digital Literacy Assessment measures all three!

- A quick, accurate indicator of computer/digital proficiency
- Mobile-first and accessible from any smart device
- Ideal for onsite and remote jobs across a variety of industries
- Flexible, cost-effective, and easy to implement

Digital Literacy Assessment is designed for easy inclusion in your existing screening process, or it can be combined with our fully integrated Hire Confidence® solution to gain a complete picture of candidates' readiness for the job.
